PREVENT HIV WITH

PREP & PEP

WHAT YOU NEED TO KNOW

**DERBY CITY
PrEP CLINIC**

PrEP • STI TESTING • STI TREATMENT

WHAT IS PREP?

PrEP (pre-exposure prophylaxis) is a once-a-day pill that reduces your risk of contracting HIV by 99%.

Currently, there are two PrEP medications - Truvada (the original PrEP) and Descovy (the most recent medical innovation in HIV prevention).

WHO NEEDS PREP?

PrEP is for everyone, regardless of age, gender, sexual orientation or relationship status. If you are at risk for any STD/STI you are also at risk for HIV.

According to the CDC, about 25% of new HIV infections are transmitted through heterosexual contact. Men who have sex with men account for about 2/3 of all new HIV infections. IV drug users are also at a significant risk.

DOES PREP HAVE ANY SIDE EFFECTS?

Most people do not experience any side effects. A small percentage of people might experience minor digestive issues or mild headaches. Truvada can lead to slight changes in bone density and kidney function, but rarely do these changes cause serious medical issues. Descovy is less likely to cause bone density or kidney issues. Truvada and Descovy have both been proven to be extremely safe medications. Your provider will closely monitor any changes PrEP may have on your health.

WHY SHOULD I BE ON PREP?

PrEP puts you in control of your HIV status, regardless of the HIV status or behaviors of your sexual partner(s). When taken properly, PrEP offers you nearly perfect protection against HIV, and it's significantly more effective than condoms.

DOES PREP PROTECT ME FROM OTHER STIS

PrEP puts you in control of your HIV status, regardless of the HIV status or behaviors of your sexual partner(s). When taken properly, PrEP offers you nearly perfect protection against HIV, and it's significantly more effective than condoms.

HOW CAN PREP INCREASE SEXUAL PLEASURE AND INTIMACY?

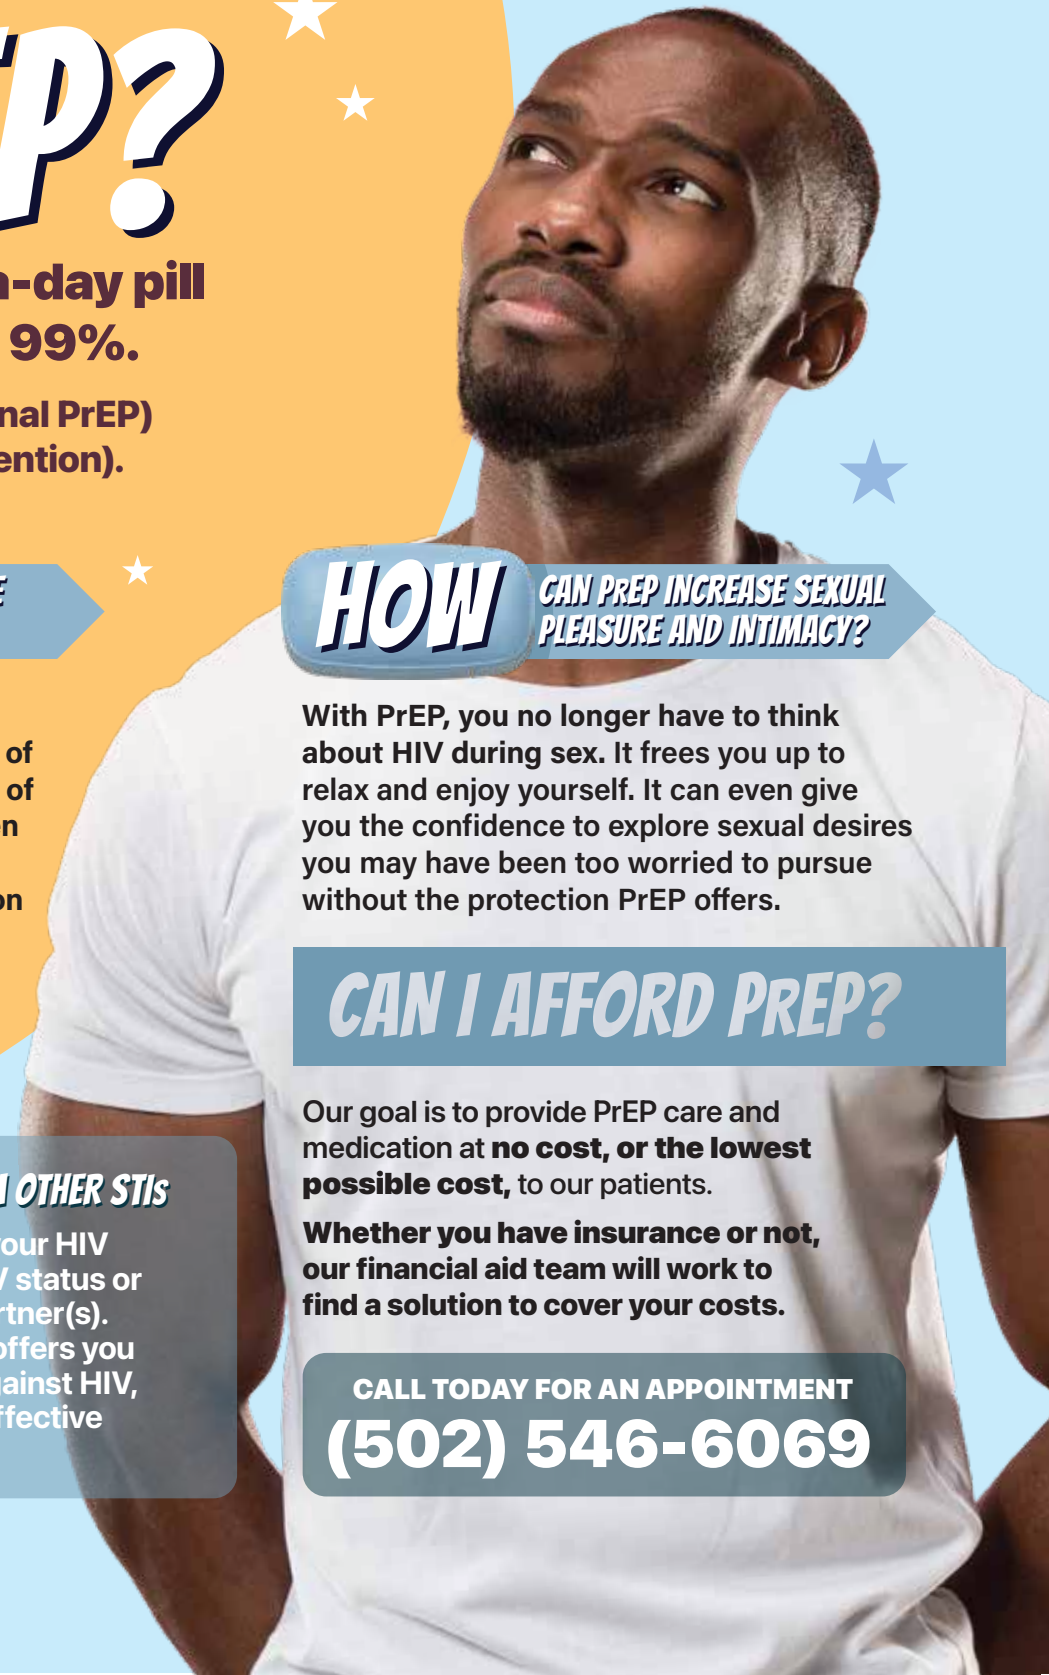

With PrEP, you no longer have to think about HIV during sex. It frees you up to relax and enjoy yourself. It can even give you the confidence to explore sexual desires you may have been too worried to pursue without the protection PrEP offers.

CAN I AFFORD PREP?

Our goal is to provide PrEP care and medication at **no cost, or the lowest possible cost**, to our patients.

Whether you have insurance or not, our financial aid team will work to find a solution to cover your costs.

WHAT IS PEP?

PEP is for those who have been exposed to HIV in the past 72 hours

PEP stands for Post-Exposure Prophylaxis. IF YOU'RE NOT ON PrEP AND YOU THINK YOU'VE BEEN EXPOSED TO HIV IN THE LAST 72 HOURS we can prescribe PEP, medication that can prevent you from becoming infected with the virus.
